CAREER OBJECTIVE

Driven professional pursuing an entry-level career keen to utilize my knowledge as well as contribute to the achievements of the team. As someone who is committed to personal and professional growth, I believe I can take this role with hard work.

EDUCATION

- HSC
2019 – 2020
INFANT JESUS MATRIC HIGHER SECONDARY SCHOOL
Percentage: 83.2%
- SSCL
2021 – 2022
INFANT JESUS MATRIC HIGHER SECONDARY SCHOOL
Percentage: 73.5%
- BACHELOR of INFORMATION TECHNOLOGY
2022 – 2026
COIMBATORE INSTITUTE OF ENGINEERING AND TECHNOLOGY
CGPA: 7.41

SKILLS

- MS Excel
- SQL
- PYTHON
- HTML
- CSS

CERTIFICATE

- Data Analyst Certification – **C Cube Technologies**
- Web Development Certification – **C Cube Technologie**

PROJECT

- **BLOOD GROUP DETECTION USING FRINGERPRINT**

The project Blood Group Detection Using Fingerprint aims to predict an individual's blood group by analyzing fingerprint images using image processing and machine learning techniques. Important features are extracted from the fingerprint patterns and used to train a machine learning model. The proposed method is non-invasive, fast, and cost-effective, making it suitable for emergency medical support, hospitals, and remote healthcare environments. This project also demonstrates the integration of biometric technology with healthcare applications.

- **IOT BASED TRAFFIC ADAPATIVE SYSTEM (PROTOTYPE)**

The IoT-Based Traffic Controlling System is designed to manage and regulate traffic flow efficiently using Internet of Things technology. Traditional traffic signal systems operate on fixed time intervals, which often leads to unnecessary congestion and increased waiting time, especially during peak hours. It serves as a key component in the development of smart city infrastructure and intelligent transportation systems.

- **JOB PORTAL WEB APPLICATION**

The Job Portal Web Application is developed to improve job search efficiency by enabling users to find relevant job opportunities based on skills and keywords. It overcomes limitations of traditional systems by providing better filtering and search functionality. The system uses frontend technologies for an interactive user interface and integrates database management for handling job data. This project highlights the use of web development and basic data analysis concepts in real world applications.

- **Mobile & Laptop Sales Dashboard (Excel)**

Developed an interactive Electronics Sales Dashboard using Microsoft Excel to analyze sales performance across different brands, regions, and product specifications. The dashboard utilizes Pivot Tables, Pivot Charts, Slicers, and KPI Cards to provide insights into revenue trends, quantity sold, top-performing brands, and regional sales distribution. Advanced Excel features such as data cleaning, calculated fields, conditional formatting, and dynamic filtering were used to transform raw sales data into meaningful business insights. This project demonstrates skills in data analysis, dashboard design, data visualization, and business reporting.
