CAREER OBJECTIVE

Driven and Enthusiastic professional pursuing an entry-level career keen to utilize my knowledge as well as contribute to the achievements of the team. As someone who is committed to personal and professional growth, I believe I can take this role with hard work and dedication.

EDUCATION

- HSC
2019 - 2020
INFANT JESUS MATRIC HIGHER SECONDARY SCHOOL
Percentage : 83.2%
- Bachelor of Information Technology
2022 - 2026
COIMBATORE INSTITUTE OF
ENGINEERING AND TECHNOLOGY
CGPA : 7.41
- SSLC
2021 - 2022
INFANT JESUS MATRIC HIGHER SECONDARY SCHOOL
Percentage : 73.5%

SKILLS

- Python
- SQL
- Power Bi
- MS Excel
- HTML
- CSS
- JavaScript

PROJECT

- **BLOOD GROUP DETECTION USING FRINGERPRINT**

The project Blood Group Detection Using Fingerprint aims to predict an individual's blood group by analyzing fingerprint images using image processing and machine learning techniques. Traditional blood group identification methods require blood samples, laboratory equipment, and time, which may not be suitable in emergency situations. In this system, fingerprint images are collected and preprocessed to enhance quality and remove noise. Important features are extracted from the fingerprint patterns and used to train a machine learning model. The trained classifier analyzes these features and predicts the blood group category such as A, B, AB, or O. The proposed method is non-invasive, fast, and cost-effective, making it suitable for emergency medical support, hospitals, and remote healthcare environments. This project also demonstrates the integration of biometric technology with healthcare applications.

- **IOT BASED TRAFFIC ADAPATIVE SYSTEM (PROTOTYPE)**

The IoT-Based Traffic Controlling System is designed to manage and regulate traffic flow efficiently using Internet of Things technology. Traditional traffic signal systems operate on fixed time intervals, which often leads to unnecessary congestion and increased waiting time, especially during peak hours. It serves as a key component in the development of smart city infrastructure and intelligent transportation systems.

- **JOB PORTAL WEB APPLICATION**

The Job Portal Web Application is developed to improve job search efficiency by enabling users to find relevant job opportunities based on skills and keywords. It overcomes limitations of traditional systems by providing better filtering and search functionality. The system uses frontend technologies for an interactive user interface and integrates database management for handling job data. This project highlights the use of web development and basic data analysis concepts in real-world applications.

CERTIFICATE

- Data Analyst Certification - **C Cube Technologies** - Covered data analysis concepts including Excel, SQL, data cleaning, and visualization
- Web Development Certification - **C Cube Technologies** - Gained hands-on experience in developing responsive web applications using HTML, CSS, JavaScript, and Python
